Test Coverage Map
Compile-Time Contract Tests
backend_selection_test.cpp
backend registry and selection scope
backend_api_contract_test.cpp
facade and raw backend API shape
preset_capability_expectations_test.cpp
host vs vendor macro-conditioned expectations
compile_time_smoke.cpp
public facade instantiation coverage
extended_peripherals_test.cpp
concept checks for extended peripherals
multi_backend_validation.cpp
cross-backend capability assumptions
edge_cases_test.cpp
validation edge conditions
Confidence in compile-time model
Runtime Behavior
mock_runtime_test.cpp
call sequencing data flow and error injection
example C API consumers
shim behavior and status mapping
Policy and Guardrails
check_capability_claim_policy.sh
claimed support vs placeholder scans
check_zero_overhead.sh
facade vs direct backend asm parity
vendor matrix scripts
real SDK header compatibility
